

I Claim:

1. A cordless hair dryer (The TOOTIE), requiring no cord leading to an external source of electricity comprising:

A curvature body and handle mean for use with a lithium battery at 7.0 to 14.5 AMPS or less, and 125V to 250V or less of power and heat for drying hair in a timely manner.

A cordless hair dryer (The TOOTIE) that comprises an AC motor means to supply current to a substance (conductor) that readily conducts heat, like the said insulation.

The said motor is charged by said lithium battery.

2. The cordless hair appliance of Claim 1 wherein said curvature handle extend inward at a angle relative to the longitudinal of said body, and are offset to share portion of said body and are adapted to receive the user fingers therein. The cordless hair dryer (The TOOTIE), of Claim 1 provides a mean for said embodiment to be operable or inoperable by the up and down of the said high and low setting means.
3. The apparatus of Claim 1 wherein said front mean circumscribes a outlet for outward air which is substantially round in shape and covered with a metal screen with appropriate hole sizes, and wherein said back mean circumscribes a outlet for inward air which is round in shape and covered with a metal screen with appropriate hole sizes.

4. The cordless hair dryer (The TOOTIE) according to Claim 1 wherein said retaining member is sufficient in diameter as to allow placement of a lithium battery within said opening at the bottom of said embodiment. The said retainer member bottom screws off clock wise.
- 5.. The apparatus of Claim 3 wherein said front means for drying the hair comprises two attachments designed to link to the front end mean therein..
6. The cordless hair dryer of Claim 4 wherein said lithium battery is furnished with the quality of power by an accessory charger therein. Using a rectifier to change amps into Watts is also possible for running the dryer.
